# **SHOWING 2010 Raff Angus Returns**

AFTER A LONG BREAK FROM THE SHOW RING, THIS YEAR WILL BE THE BEGINNING OF A MAJOR 'TAKE OUR CATTLE TO THE PEOPLE' PROMOTION UNDER THE RAFF ANGUS PREFIX.

Our decision to return to showing is because we but of all other breeds. During this time and into the believe that the Angus Cattle we have in our herd 1980's our cattle achieved much success in the show today are unique in both type and genetic makeup ring winning numerous Interbreed Championships, within the Angus breed in Australia. The purchase in twelve Royal Show Grand Championships and three 2006 of the four top Hoff Scotch Cap cows has taken National Angus Heifer Show Champions. our cattle to a new level in the industry. This We are excited about our role in providing the substantial investment has resulted in progeny with industry with genetics that have those strengths in more growth, muscle and yield than mainstream traits that we believe the breed is in dire need of to Angus but more importantly are of total outcross take it forward into the future. With our existing herd genetics bred from a herd that has dominated the backed by 45 years breeding being complemented by Angus Industry in the USA for decades. the infusion of these new Hoff genetics, also with 45 years of breeding, we are able to offer the industry Angus cattle bred from herds on opposite sides of the world by cattlemen with identical breeding philosophies with a combined 90 years experience. We look forward to sharing these genetics with the Australian industry.

Showing cattle has played a big part in the development and promotion of Raff Angus cattle. From the early 1970's, under the 'Forres' prefix, it provided us with a benchmark against all breeds of beef cattle and gave us an appreciation of the strengths and weaknesses of not only our own cattle

# Point of View by David Raff

"It is time to refocus on the VALUABLE NATURAL PROPERTIES of Angus cattle." In 1910, one hundred years ago, a book was published 'HISTORY OF ABERDEEN-ANGUS CATTLE'. This book gives a great insight into not only the history of the breed

but also the master stockmen who developed the breed and the way they identified those traits that are so important to the Angus breed today - one hundred years later.

Some quotes to ponder:

From the breeds beginnings over two hundred years ago the black polled cattle were identified for their meat quality. unique to Angus as most of those current breeds were principally bred as working ox to pull ploughs. Many of the early Angus were bred by butchers who are constantly quoted as referring to their carcasses as 'choice butcher's quality' and 'meat being fine in the grain and well mixed'.

- At Smithfield in 1885 a 2 year 8 month old Angus had a live weight of 1714 lbs (780 kg) with a dressed weight of 1318 Ibs (600 kg), "showing the marvellous percentage of 76%. Mr. McCrombies celebrated ox Black Prince - the Champion of 1867 - came within a fraction of a ton in dead weight while his prize ox Poissy in 1857 weighed 2728 lbs (1240 kg)".
- Measurements showing that the original native animals must have been of huge dimensions. The length of the body 'from the nape to the end of the rump-bones' is stated at about 9 feet (2.7 meters); and 'the height over the mane' is said to have been 78 inches (1.95 meters).
- The breed founders focused on the importance of not losing 'the valuable natural properties not found in an equal in any other breed' and 'the genuine article should always bear its trademark'.

How important for the careful improvers of the breed to be 'specially particular as to the hindquarters' while they aim at 'developing long, thick, deep guarters they also strive to retain the rounded appearance: The eves mild. large and expressive; the throat clean; the neck long, clean passing neatly and evenly into the body with full neck veins; the shoulder blades should lie well backwards, fitting neatly into the body, and not lying awkwardly outside it; the chest should be wide and deep, so as to give plenty of room for lung development; the ribs well sprung,

springing out barrel-like; the skin soft and pliable, mellow to the touch; a strong, masculine-looking head on a bull and a neat feminine-looking one on cows'

When walking they should have 'a graceful and symmetrical appearance."

Finally a quote from Mr. George J Walker in 1872: "What class of animals breeds most surely, stands the climate best. Is hardiest, least liable to disease, is most easily kept; gives the best milk in greatest quantities, grows and fattens soonest for the amount of food consumed, weighs heaviest for bulk, and when ripe realizes most per cent.? My answer is the Aberdeen Angus."

Raff Doris W10 by Raff Ultimate U27

A group of 14 month old 2009 Raff Sale Bulls

In the past decade the Angus Breed has focused on so called 'performance' in its selection through EBV's and \$Index Values. In its guest to breed animals with better 'numbers' many of these 'valuable natural properties' of the breed have been lost. I believe it is time for Angus breeders and its extension activities to refocus on these 'valuable natural properties'. We can learn from our breed founders how to identify these basic breed characteristics that have made the breed famous. That is why we at Raff Angus have resisted using the 'fashionable' and 'trendy' genetics with great numbers over the past decade. We recognized the importance of those valuable natural properties of the breed and have retained them in our Angus cattle because we know after 45 years that they are the cattle that really perform.

Hoff Blackbird 594 5217. Our most exciting donor cow. A maternal sister to Limited Edition that is breeding cattle with beautiful skin, great temperament and powerful performance - look out for her sons.

### THE RAFF ANGUS DIFFERENCE

of these exciting new outcross genetics in

HERD.

Selecting for a low birth weight and a low mature cow weight will have a diminishing effect on each generation. That's how the Lowline breed was

established — breeding small to small, generation after generation!
